

Advantages Data Logging Systems:

- allows to collect **ANALOGUE** data (like temperature, air pressure, velocity)
- allows to collect data **NON-STOP**, 24 hours a day
- allows to **SHARE** data (when the computer is in a **NETWORK**)
- works automatically, no human support needed
- data can be transferred by **WIRES** or even **WIRE-LESS** (sender / receiver)
- system will report (log) **ERRORS**

Examples of Data Logging Systems:

- Weather forecast systems (usually connected via **WAN's**)
sharing worldwide **Networks** and remote **Transmission** (satellites)
- Traffic control systems (traffic lights, speed control / cameras)
- Airconditioning systems (private use, also Greenhouses))
